

**Kawasaki Institute of Industrial Promotion**  
**TONOMACHI LifeScience Cluster Division**  
**Starts Business Incubator**

King Skyfront is located on the opposite bank of Haneda Airport across the Tama River, and is an International Strategic Zone with excellent domestic and overseas transport links. At the King Skyfront and its surrounding areas, the concentration of research and development institutions such as universities and companies is increasing due to the efforts by the Government of Kawasaki City. This trend reflects the value role of King Skyfront as an open innovation hub for the creation of new industries based on the world's highest level of research and development in the life sciences.

The Kawasaki Institute of Industrial Promotion (KIIP) has decided to launch a Business Incubator from April 2022 for the development of an innovation ecosystem in the area and continuous creation of new world-class industries. KIIP will establish laboratories for start-ups in the "Innovation Center of NanoMedicine (iCONM)" operated by KIIP.

In addition to R & D support, KIIP will offer start-ups a lot of support for developing their business and expanding their networks. For business support, KIIP will provide business mentoring and business planning support by experts active in the life sciences, introduce experts in legal affairs/regulation/accounting, and for networking support, will collaborate with overseas ecosystems the USA and Europe. KIIP will hold matching/pitch events and management seminars as points of contact with overseas investors and pharma.

Contact details
